ETS×KOA 特別講義　KOA 講師向け資料

2025 年共通テスト（リーディング）第 8 問を抜粋し，Writing for an Academic Discussion と同じ形式の問題に作り変えています。生徒には，事前に下記の問題を解いてきてもらい，KOA の授業では答案の確認とフィードバックをお願いします。

問題

Your professor is teaching a class on science. Write a post responding to the professor's question.

In your response you should:

・express and support your opinion

・make a contribution to the discussion

An effective response will contain at least 100 words.

Over the next few weeks, we are going to look at lots of different materials about space exploration. More and more rockets are being launched into space to explore other planets. But first, I want to know what you think about this topic. So here's a question for the class discussion board:

Do you think space exploration is beneficial to humans? Why or Why not?

Naomi　(lawyer)

Historically, jobs working at sea were likely the least safe, with the highest rates of death in the workplace. In modern times, space is no different, if not worse. Once we are just 10,000 meters or so above the surface of the Earth, there is little oxygen and the temperature is too low for human survival. Since the first person went into space in 1961, 19 of 652 astronauts have died on the job: a fatality rate of 2.9%. No other business or industry would tolerate such a high level of danger. Why should the space industry?

Victor　(financial analyst)

Space exploration has contributed hugely to economic growth. In the USA, NASA provided work for nearly 340,000 people in 2021, mostly at above-average salaries, and it is estimated that it has contributed $7.7 billion in taxes to the US government. Space is also being explored by other countries, such as China, India, Japan, and Russia. In the future, further economic growth will be ensured by more private firms entering the space race and by the rise of space tourism, space mining, space colonization, and space militarization.

フィードバックの注意点

基本的には，問題指示文とルーブリック（別途 PDF 参照。Official Guide の pp. 210-211 にも記載）に沿って確認していただければと思います。Rubric には得点が 5 段階で設定されていますが，予想スコアを伝える必要はありません。主に，以下の点で問題が無いか，確認してください。

＜主なチェック項目＞
・100 語以上，書けている。
・自分の意見と主張を明確に書けている。
・議論に貢献するような内容が書けている。
・説明が具体的に書かれており，あいまいな点がない。
・単語，イディオム，構文のバリエーションが豊富である（特に単文だけで文章が構成されていた場合は，指摘する）。
・文法ミス，単語の綴りミス，不自然な単語の使い方がない。

生徒には，セミナーで要約の練習をさせているため，Naomi と Victor の意見の要約と自分の立場，追加の意見という流れで書かれた答案が多いと予想されます。

その他，質問が予想される点を記載させていただきます。ご確認ください。

＜予想される質問＞
・Naomi や Victor が発言したのは過去なので，Naomi mentioned のように解答は過去形で書かなくてよいか。
→現在形でも過去形でも問題ないが，同じ解答の中でバラつきが出るのは避ける。

・Naomi とも Victor とも異なる，第 3 の意見を書いてもよいか。
→問題無い。「議論に貢献する」が指示文のため，必ずしも 2 人の意見のどちらかに合わせる必要はない。

解答例

下記のとおり，生徒には解答例を公開しています。授業中では特に触れる必要はありません。解答例に関する質問はしないようにセミナーでは伝えているため，解答例に関する質問を受けた場合は，特に回答しなくてもかまいません。

解答例１（宇宙開発に賛成の立場）

I agree with Naomi because, as she mentions, space exploration is risky even with our latest technologies. In fact, many astronauts have lost their lives while exploring space, and serious accidents will continue to occur if we keep exploring space. However, I support Victor more, when I consider the huge economic benefits. Currently, a number of people are losing their jobs due to the bad economy. If more companies start exploring space in the future, many industries will receive financial benefits, creating employment opportunities. In addition, space exploration enables us to gain scientific knowledge and facilitate technological development. For example, if space exploration becomes more common, the food industry will develop various foods that can be consumed in space. As a result, the problem of food shortages is more likely to be solved.（133 words）

解答例２（宇宙開発に反対の立場）

I agree with Victor that space exploration provides us with many chances for economic development. If we put more focus on space, government spending will increase, and space development industries will have more job opportunities. However, I agree with Naomi more, when I consider the potential dangers of space exploration. As she mentions, the possibility of an accident in space is much higher than that of a traffic or airplane accident. I'm concerned that further space exploration will lead to the loss of more precious lives. Moreover, space exploration causes environmental damage. For instance, launching a rocket pollutes the air and consumes vast amounts of natural resources. Since we have already damaged the environment over the past century, we should develop sustainable economies for future generations rather than waste money on space exploration.（133 words）
